Essay on Dr . Vikram Sarabhai

In this essay I am writing few lines about the famous person and he is the role model for so many members and we all call him as the “ **Father of the Indian Space Programme** ” and he is none other than “ **Dr.Vikram Ambalal Sarabhai** ” .

He was born in industrialist family but he is very much interested in science and that interest become to him as a scientist . He is a scientist , innovator , industrialist , visionary and an award winning physicist . He was the founder of Indian Space Research Organisation .

He worked on the india's first satellite Aryabhata is fabricated under the guidance of Vikram Sarabhai . He started working on rocket designing . He started many institutes . He started the first research market organization in the country .

He is a role model for many young people and Dr . APJ Abdul Kalam also inspired by Dr . Vikram

Sarabhai . He guided Kalam in initial stage of his career by seeing his excellence in the academics with that he sent Kalam to NASA and after that kalam worked under the Vikram Sarabhai as a project director . Dr . Sarabhai always encourages the young people and when Kalam was in young age Vikram Sarabhai always guided him to go in right path for to get anything like success or failure and accept the thing what we get and learn from failure by listening these words Kalam inspired a lot .

By listening about the Vikram Sarabhai I inspired a lot . I always believe that who do hardwork and someday they will get the success .

So hardwork , visionary and determination towards the work I learnt these from these two people they are Kalam and Vikram Sarabhai and I always believe these words and I also started doing hardwork to reach my goal .

This is about the great scientist which we never forget about him and he is role model for many people .
